DETAILED ACTION

1. Claims 1-45 have been examined and are pending with this action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10, 12-19, 21-31, 33-41, and 44-45 are rejected under 35 U.S.C. 102(b) as being anticipated by Logan et al. (US 5732216 A).

INDEPENDENT:

As per claim 1, Logan teaches an electronic message comprising: sound file (see col.42, line 67 to col.43, line 2); and, predetermined identifier indicating an aspect of said sound file (see col.15, lines 15-19; col.44, lines 12-15; and col.45, lines 52-54).

As per claim 8, Logan teaches a method for sending an e-mail comprising: attaching a sound file to an e-mail (see col.42, line 67 to col.43, line 2); and utilizing a predetermined identifier indicating an aspect of said sound file into said email (see col.15, lines 15-19; col.44, lines 12-15; and col.45, lines 52-54).

Art Unit: 2155

As per claim 24, Logan teaches a method for announcing electronic messages comprising: receiving an electronic message with an attached sound file (see col.42, line 67 to col.43, line 2); noting the presence of a predetermined identifier indicating an aspect of said sound file (see col.15, lines 15-19; col.44, lines 12-15; and col.45, lines 52-54); and, playing the attached sound file (see col.1, lines 42-46).

DEPENDENT:

As per claims 2-4, 14-16, and 26-28, Logan further teaches wherein said sound file contains at least one word in a computer-simulated voice and at least one word in a sender's voice (see col.28, lines 19-26).

As per claim 5, Logan further teaches wherein the predetermined identifier is a specific file name associated with said sound file (see col.5, lines 6-15).

As per claims 6, 17, and 29, Logan further teaches wherein the predetermined identifier is an information tag (see col.44, lines 12-15).

As per claims 7, 18, and 30, Logan further teaches wherein the information tag is embedded in the e-mail header (see col.43, lines 5-15).

As per claim 9, Logan further teaches wherein said attaching, is performed by a computer at a sending party's end (see col.15, lines 15-19).

As per claim 10, Logan further teaches wherein said attaching is automatic (see col.10, lines 28-36).

As per claim 12, Logan further teaches wherein said attaching, is performed by an e-mail server (see col.4, lines 40-46 and col.6, lines 39-41).

Art Unit: 2155

As per claim 13, Logan further teaches wherein said attaching is, performed by a recipient computer (see col.2, lines 10-14 and col.15, lines 15-19).

As per claims 19 and 31, Logan further teaches wherein the information tag, is embedded by a sender computer (see col.43, lines 26-33 & 46-60 and col.44, lines 12-15).

As per claims 21 and 33, Logan further teaches wherein the information tag, is embedded by an e-mail server (see claim 7 and 19 rejection above).

As per claim 22 and 34, Logan further teaches wherein the information tag, is embedded by a recipient computer (see claim 13 and 19 rejection above).

As per claim 23, Logan further teaches wherein said attaching, is selectively performed by a sending party (see col.11, lines 27-34).

As per claim 25, Logan teaches of further comprising receiving at least one more electronic message with an attached sound file and playing said at least one more sound file (see col.7, lines 51-61).

As per claim 35, Logan further teaches wherein said playing is selective (see col.46, lines 26-28).

As per claim 36, Logan further teaches wherein said playing is performed at a recipient computer (see col.1, lines 42-49).

As per claim 37, Logan further teaches wherein said playing is performed at a recipient customer premise equipment (see col.1, lines 42-49)

As per claim 38, Logan further teaches where said playing is performed at a recipient voice mail (see col.15, lines 31-46).

Art Unit: 2155

As per claim 39, Logan teaches of further comprising converting the content of the electronic message to a voice message (see col.28, lines 19-26).

As per claim 40, Logan further teaches where said converting is performed at an e-mail server (see col.5, lines 26-31).

As per claim 41, Logan further teaches where said converting is performed at a recipient computer (see col.5, lines 16-26).

As per claim 44, Logan further teaches wherein said converting is performed using a sound file as a voice sample.

As per claim 45, Logan teaches of further comprising transferring said voice message to a voice mailbox (see col.15, lines 31-46 and col.29, lines 36-41).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 11, 20, 32, 42, and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Logan et al. (US 5732216 A) in view of Agraharam et al. (US 6085231 A).

As per claims 11, 20, 32, and 42, Logan further teaches wherein said attaching is performed by a computer at a sending party's end (see claim 9 rejection above),

Art Unit: 2155

wherein the information tag is embedded by a computer at a sending party's end (see claim 7 rejection above), and wherein said converting is performed at a computer at the receiving party's end. Logan does not explicitly teach of an adjunct to a sender or a receiver for performing these steps. Agraharam teaches of an adjunct (see col.3, lines 20-29). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to employ the teachings of Agraharam within the system of Logan by implementing adjunct devices or means for performing each function by means of adjunct devices or servers or the like within the method for sending an e-mail or announcing and electronic message because such an implementation would increase performance to compensate for larger or increase in the number of users or members and an increase in sound file size by dedicating specific servers to perform specific tasks.

As per claim 43, Logan does not explicitly teach wherein said converting is performed at a voice messaging system. Agraharam teaches wherein said converting is performed at a voice messaging system (see Fig.2, #202 & #206 and col.4, lines 7-17). It would have been obvious to a person of ordinary skill in the art at the time the invention was made to employ the teachings of Agraharam within the system of Logan by implementing conversion to be performed at a voice messaging system within the method for sending an e-mail or announcing and electronic message because Logan teaches of voice messages (see col.29, lines 39) and explains how conversion is preferable at the client station to quickly download text files rather than audio files which are larger thus increasing transmission time (see col.5, lines 16-26).
